

Students' Talk on 16.12.2025 of Semester 5 Major Mathematics Students

A Students' Talk was organized on 16 December 2025 in Room No. 1 of the Mathematics Department from 12:30 p.m. to 2:00 p.m. The programme was attended by Semester 5 Major students, all of whom actively participated in the session. Each student delivered a talk of approximately 30 minutes on self-selected topics, demonstrating their subject knowledge, presentation skills, and confidence.

Four faculty members were present throughout the session and played an active role in evaluating the presentations. After each talk, the teachers posed relevant and thought-provoking questions related to real-life applications and future academic or professional challenges. These interactions helped students to think critically, improve clarity of concepts, and prepare themselves for higher studies and competitive environments.

The session proved to be highly interactive and intellectually stimulating. It provided students with a valuable platform to enhance their communication skills, deepen conceptual understanding, and build confidence while addressing academic audiences.
